in which at least one of the glutamic acids in positions 17, 21 and 24 is gamma-carboxylated, characterized by the specificity to epitopes that have been identified on the gamma-carboxylated fragment of osteocalcin, wherein said fragment spans either

- i) from the amino acid in position 7 to the amino acid in position 30, or
- ii) from the amino acid in position 6 to the amino acid in position 30 of the amino acid sequence of SEQ ID NO:2, and that all three glutamic acids in the positions 17, 21 and 24 of said sequence are gamma-carboxylated.

6. (Amended) A non-competitive immunoassay for quantitative determination of a gamma-carboxylated osteocalcin fragment, comprising the amino acid sequence
